Survey Description

The Beyond Evaluation Use Grant (EUG) team acquired names and email addresses for the principal investigators (PIs), co-principal investigators (co-PIs) and evaluators for each of the four NSF programs: ATE, CETP, LSC, MSP-RETA. Descriptions of the programs and their respective evaluations are provided in other grant-related documents. The team compiled lists from project rosters and meeting rosters provided by the program evaluation personnel. The lists from the program evaluators contained the most recent emails on record, but some names were missing email addresses. In such instances, a member of the EUG team searched the Internet for an email address. The total population for this study consisted of all 935 project PIs and evaluators.

Online Survey

An online survey was conducted with evaluators and project leaders in program-level evaluations of four large, multi-site science, technology, mathematics and engineering education interventions.

The program evaluators and PIs received an initial invitation email with a description of the survey, an explanation of its use, the Human Subjects approval number, and telephone numbers to call with questions. The email also contained a link to the online survey with a login and password. Two and four weeks following the first email, the team sent email reminders to non-respondents.

Table 1. Survey Population

	ATE	CETP	LSC	MSP-RETA	Total Sample
Evaluators	11	19	30	3	63
Leaders (PIs, project staff, project-related consultants, etc.)	175	35	43	53	306
Total	186	54	73	56	369

The EUG team staggered the distribution of the survey emails by program to minimize technical difficulties associated with mass emails (e.g., returned emails, server overload). Although distribution was staggered, all programs received an initial invitation email with a description of the survey, an explanation of its use, and the Human Subjects approval number and phone numbers to call with questions. The email also contained a link to the online survey with a login and password. Two and four weeks following the first email, the team sent reminders to non-respondents. The data were collected from August 10, 2006 through January 17, 2007.

Response Rate

Twenty-two percent (215/935) of the emails were returned as undeliverable. EUG Team members conducted Internet searches and, in some cases, phone research, to find working email addresses. About half (109/215) of the invalid email addresses were replaced with new emails. Of the new emails, 86 worked and 23 failed again. The sampling frame, the number of ATE, CETP, LSC, MSP-RETA PIs and evaluators with valid email addresses, was 810, with an overall response rate of 46% (372/810).

Respondents came from all but three states in the U.S (Arkansas, Kansas, and Wyoming), as well as the District of Columbia and Puerto Rico. Fifty-four percent of the sample was male, 43% female, and three percent preferred not to respond.

Table 2. Surveys Completed

Program	**Respondents**	**Response Rate**		**Unreachable**
ATE	188*	46%	188/409	84
CETP	54	55%	54/99	18
LSC	74*	53%	74/139	19
MSP-RETA	56	34%	56/165	4
Total	372	46%	372/811	125

*2 respondents from ATE and 1 from LSC provided unusable data, so their surveys are not included in the analysis.

Table 3. Surveys Completed by Role

Program	Evaluator	PI or Project Staff	Other*	Total
ATE	11	172	3	186
	5.9%	92.5%	1.6%	100.0%
CETP	19	33	2	54
	35.2%	61.1%	3.7%	100.0%
LSC	30	43	0	73
	41.1%	58.9%	.0%	100.0%
MSP-RETA	3	47	6	56
	5.4%	83.9%	10.7%	100.0%
Total	63	295	11	369

*For the analysis, evaluators were compared to Leaders (PI's, project staff, and other).

EUG Survey Non-response Study Summary Data

To check for non-response error, we conducted a non-respondent follow-up survey following the web survey of the PIs and evaluators in each of the four programs. Non-response error results when the people who responded to the survey are different from the individuals in the sample who did not respond, in a way that is relevant to the study. We developed a three-question non-respondent survey to address the topics of involvement and use, as well as to gather some information about what kept individuals from responding to the initial survey and reminder emails. Recipients of the non-respondent email were asked to select from the following responses: 1 – not at all involved; 2 – involved a little; 3 – involved some; and 4 – involved extensively.

The non-respondent survey items were:

1. How involved were you in the *[Name of Program Evaluation]*?
2. How much impact did the *[Name of Program Evaluation]* have on you?
3. What was the main thing that kept you from responding to our initial survey request?

A random sample of non-respondents to the survey in each of the four programs (ATE, CETP, MSP, and LSC) was drawn using SPSS. Each person was sent a personal, individually addressed email with a request for their input on the three items. Two reminder emails were sent to each of the respondents who did not respond. Then, if email contact did not solicit a response, the individuals were contacted by telephone. The table below shows the response rates of both the initial survey ("respondents") and the non-respondent follow-up survey ("non-respondents").

Table 4. Response Rates

	Respondents		Non-Respondents	
ATE	46%	188/409	49%	36/74
CETP	55%	54/99	57%	17/30
LSC	53%	74/139	47%	14/30
MSP	34%	56/165	58%	22/38
Total	46%	372/81	52 %	89/172

The results of the analysis comparing the respondents and non-respondents showed differences in the overall levels of involvement and impact/use reported. In the case of ATE and CETP, the mean of the survey respondents was higher than the mean of the non-respondents for both involvement and use/impact. For LSC and MSP, the use/impact mean was higher than the mean of the non-respondents, but the involvement mean was lower for respondents than for non-respondents in the LSC and MSP programs.

The Involvement Mean for the respondents was calculated as the mean of fourteen questions on the original survey. The Use/Impact Mean was calculated in the same way, using the fourteen survey questions related to evaluation use and impact. The means for the non-respondents were simply the means of their answers to the two questions they responded to via email. Though these measurements are not identical, the two sets of means closely mirror one another in that the 4-point scale for each question or set of questions is the same. The larger survey's multiple items related to use were distilled into a single question that we chose to label "impact" as a global concept to encompass questions about use of the process, instruments, and results of the evaluation. The differences shown in the table below may indicate the possibility of upward bias in the estimates of overall involvement and use/impact for survey respondents or it may also be an artifact of the difference between use, influence and overall impact.

Table 5. Summary of Findings of Mean Comparisons

	Involvement Mean		Use/Impact Mean	
Program	**Respondents**	**Non-Respondents**	**Respondents**	**Non-Respondents**
ATE	2.39	2.36	2.50	2.06
CETP	2.38	1.82	2.52	1.76
LSC	2.71	3.14	2.85	2.69
MSP	1.76	1.95	2.02	1.90
Total	2.36	2.28	2.50	2.06

Reasons for Not Responding

Of the 89 total responses across all four programs, almost 25% reported that they did not feel the survey applied to them, and nearly 24% did not remember having received the initial survey. In addition, approximately 18% cited a lack of time and 5% reported having had technical problems. Over 20% offered a range of specific reasons in the "other" category, the basic themes of which were: a) they no longer worked with the project, b) they confused this survey with another survey from the still-ongoing ATE program; c) there was confusion within their project about who would be responding to the survey, and d) a variety of individual explanations, such as deaths in the family. Eight percent did not answer the question.

Report Format

For the purposes of this report, data from all cases are presented separately for each program (ATE, CETP, LSC, and MSP-RETA), divided by role (Evaluator or Non-evaluator). Leaders included PIs, Co-PIs, project directors or staff, and the occasional external writer or non-evaluation consultant. This format allows a reader to view results from all programs

individually, which is most appropriate given the differences in both program and program evaluation design.

ATE Responses

Table 6. Surveys Completed

Program	**Respondents**	**Response Rate**		**Unreachable**
ATE	188*	46%	188/409	84

*2 respondents from ATE provided unusable data, so their surveys are not included in the analysis.

Table 7. Surveys Completed by Role

Program	**Evaluator**	**PI or Project Staff**	**Other***	**Total**
ATE	11	172	3	186
	5.9%	92.5%	1.6%	100.0%

*For the analysis, evaluators were compared to non-evaluators (PI's, project staff, and other).

Table 8. Evaluation Experience – ATE

Role	**First Evaluation**	**Novice**	**Skilled**	**Expert**	**Total**
Evaluators	0	3	5	3	11
	0%	27.3%	45.5%	27.3%	100.0%
Non-Evaluators	48	72	43	10	173
	27.7%	41.6%	24.9%	5.8%	100.0%

Involvement – ATE

Thirteen of the first 16 questions on the survey asked respondents about their perceptions of involvement during the planning, implementation and communication phases of the program evaluation. Each involvement question began with "I was involved in…." This section included a question at the end of each phase regarding the motivation for involvement. Results of the motivation questions (4, 11, & 16) are presented after the Involvement tables.

Developing future project plans based on evaluation results	2.70	3.00	10	1.06	2.46	3.00	168	1.37

Motivation for Involvement – ATE

The questions related to motivation asked respondents to choose an option (required, asked, or volunteered, was not involved) that best described the motivation for involvement during the specific evaluation stage (planning, implementing, or communication of findings).

Table 13. ATE Motivation – Planning

Role	Required	Asked	Volunteered	N
Evaluators	20.0%	70.0%	10.0%	10
Leaders	33.0%	25.2%	41.7%	103
Total	31.9%	29.2%	38.9%	113

Table 14. ATE Motivation – Implementation

Role	Required	Asked	Volunteered	N
Evaluators	30.0%	50.0%	20.0%	10
Leaders	35.0%	26.7%	38.3%	120
Total	34.6%	28.5%	36.9%	130

Table 15. ATE Motivation – Communication

Role	Required	Asked	Volunteered	N
Evaluators	50.0%	40.0%	10.0%	10
Leaders	36.6%	20.5%	42.9%	112
Total	37.7%	22.1%	40.2%	122

Influence on the Evaluation – ATE

Questions 17 – 22 asked about the perception of influence on the program evaluation, differentiating between consideration and actual use.

Table 16. ATE Influence on the Evaluation

Items 17-22	*Role*	Was not involved	No	Yes, a little	Yes, some	Yes, extensively	Do not know	N
Input during planning was taken into consideration	Evaluators	9.1%	.0%	.0%	9.1%	72.7%	9.1%	11
	Leaders	32.6%	1.1%	7.4%	20.6%	32.6%	5.7%	175
	Total	31.2%	1.1%	7.0%	19.9%	34.9%	5.9%	186
Input during implementation was taken into consideration	Evaluators	9.1%	.0%	.0%	9.1%	72.7%	9.1%	11
	Leaders	30.3%	2.3%	8.6%	20.6%	30.9%	7.4%	175
	Total	29.0%	2.2%	8.1%	19.9%	33.3%	7.5%	186
Input during communication was taken into consideration	Evaluators	9.1%	.0%	.0%	9.1%	81.8%	.0%	11
	Leaders	31.4%	1.7%	8.0%	20.6%	29.7%	8.6%	175
	Total	30.1%	1.6%	7.5%	19.9%	32.8%	8.1%	186
Input during planning was used.	Evaluators	9.1%	.0%	9.1%	.0%	72.7%	9.1%	11

1=No 2=Yes, a little 3=Yes, some 4=Yes, extensively

Evaluation Influence – ATE

The survey asked respondents to reflect on the extent of the influence the program evaluation had on their knowledge/understanding (Q25 - Q30), skills (Q31 – Q36), and beliefs (Q38 – Q43). Question 37 asked whether the evaluation had a negative impact and then offered space for a written explanation. The results for this question are presented before the Influence on Beliefs table.

Table 17. ATE Influence on Knowledge & Understanding

Items 25-30	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**
The evaluation increased my knowledge/ understanding of how to plan an evaluation.	Evaluators	36.4%	9.1%	36.4%	18.2%	11
	Leaders	21.4%	26.0%	34.1%	18.5%	173
	Total	22.3%	25.0%	34.2%	18.5%	184
The evaluation increased my knowledge/ understanding of how to implement an evaluation.	Evaluators	36.4%	9.1%	36.4%	18.2%	11
	Leaders	20.2%	28.9%	34.7%	16.2%	173
	Total	21.2%	27.7%	34.8%	16.3%	184
The evaluation increased my knowledge/ understanding of how to communicate evaluation findings.	Evaluators	27.3%	27.3%	36.4%	9.1%	11
	Leaders	25.6%	24.4%	35.5%	14.5%	172
	Total	25.7%	24.6%	35.5%	14.2%	183
The evaluation increased my knowledge /understanding of STEM education.	Evaluators	18.2%	9.1%	54.5%	18.2%	11
	Leaders	32.7%	22.8%	30.4%	14.0%	171
	Total	31.9%	22.0%	31.9%	14.3%	182
The evaluation increased my knowledge /understanding of STEM education evaluation.	Evaluators	18.2%	9.1%	54.5%	18.2%	11
	Leaders	23.5%	23.5%	36.5%	16.5%	170
	Total	23.2%	22.7%	37.6%	16.6%	181
The evaluation increased my knowledge/ understanding of my project.	Evaluators	27.3%	.0%	45.5%	27.3%	11
	Leaders	21.8%	19.4%	35.3%	23.5%	170
	Total	22.1%	18.2%	35.9%	23.8%	181

Table 18. ATE Influence on Knowledge/Understanding Means

Items 25-30	**Evaluators**				**Leaders**			
	Mean	Med	N	SD	Mean	Med	N	SD
The evaluation increased my knowledge/ understanding of how to plan an evaluation.	2.36	3.00	11	1.21	2.50	3.00	173	1.03
The evaluation increased my knowledge/ understanding of how to implement an evaluation.	2.36	3.00	11	1.21	2.47	3.00	173	.99
The evaluation increased my knowledge/ understanding of how to communicate evaluation findings.	2.27	2.00	11	1.01	2.39	2.50	172	1.02
The evaluation increased my knowledge/ understanding of Science, Technology, Engineering, and Mathematics (STEM) education.	2.73	3.00	11	1.01	2.26	2.00	171	1.06
The evaluation increased my knowledge /understanding of STEM education evaluation.	2.73	3.00	11	1.01	2.46	3.00	170	1.03
The evaluation increased my knowledge/ understanding of my project.	2.73	3.00	11	1.19	2.61	3.00	170	1.07
Influence on Knowledge/Understanding Mean	2.53	2.83	11	.97	2.45	2.50	173	.92

Table 19. ATE Influence on Skills

Items 31-36	*Role*	No	Yes, a little	Yes, some	Yes, extensively	N
The evaluation improved my skills in planning an evaluation (e.g., discussing the focus of the evaluation, identifying evaluation planning team members, developing the evaluation plan).	Evaluators	18.2%	27.3%	36.4%	18.2%	11
	Leaders	21.1%	29.8%	32.7%	16.4%	171
	Total	20.9%	29.7%	33.0%	16.5%	182
The evaluation improved my skills in implementing an evaluation (e.g., developing data collection instruments and processes, collecting, analyzing, reviewing, and interpreting data).	Evaluators	27.3%	18.2%	45.5%	9.1%	11
	Leaders	21.1%	32.7%	31.6%	14.6%	171
	Total	21.4%	31.9%	32.4%	14.3%	182
The evaluation improved my skills in communicating evaluation findings (e.g., writing and reviewing evaluation reports, presenting evaluation findings).	Evaluators	27.3%	18.2%	45.5%	9.1%	11
	Leaders	25.7%	28.1%	32.2%	14.0%	171
	Total	25.8%	27.5%	33.0%	13.7%	182
The evaluation improved my skills as a STEM educator.	Evaluators	45.5%	.0%	36.4%	18.2%	11
	Leaders	37.8%	23.8%	29.1%	9.3%	172
	Total	38.3%	22.4%	29.5%	9.8%	183
The evaluation improved my skills as a STEM education evaluator.	Evaluators	18.2%	9.1%	63.6%	9.1%	11
	Leaders	27.2%	29.6%	32.5%	10.7%	169
	Total	26.7%	28.3%	34.4%	10.6%	180
The evaluation improved my skills for working on my project.	Evaluators	36.4%	9.1%	36.4%	18.2%	11
	Leaders	22.8%	24.0%	35.1%	18.1%	171
	Total	23.6%	23.1%	35.2%	18.1%	182

1=No 2=Yes, a little 3=Yes, some 4=Yes, extensively

Table 21. ATE Negative Influence on Beliefs

Item	***Role***	**No**	**Yes**	**N**
Has the evaluation had a negative impact on your belief about evaluation?	Evaluators	90.9%	9.1%	11
	Leaders	88.2%	11.8%	169
	Total	88.3%	11.7%	180

Negative Impacts – ATE

Table 22. Examples of negative impact

Item	***Selected Open-Ended Responses* (21/180 or 12% responded.)**
Examples of Negative Impacts	I became more aware of the complexity. The process to try to develop an evaluation has been painful. I don't believe we adequately framed the problem. The goal of the evaluation is fuzzy. It is not NSF's fault. We Community Colleges don't have consensus on our mission, or even on qualitative and quantitative measures of evaluating our value-add, much less the success of innovative ATE programs.
	The evaluation used and submitted via FastLane is not very pertinent for evaluation of our grant. This method of evaluation is a relative negative for our team and the grant partners. Much of the information provided is BAG.
	This became a process of "bean-counting" and did not reflect the greater richness that we are trying to seek through our center.
	I lost time from primary role as an instructor, and it created extra stress.
	Money and politics dictate how to accommodate and deliver the intended NSF fund driven social services.
	I became more aware of the complexity. The process to try to develop an evaluation has been painful. I don't believe we adequately framed the problem. The goal of the evaluation is fuzzy. It is not NSF's fault. We Community Colleges don't have consensus on our mission, or even on qualitative and quantitative measures of evaluating our value-add, much less the success of innovative ATE programs.
	The evaluation used and submitted via FastLane is not very pertinent for evaluation of our grant. This method of evaluation is a relative negative for our team and the grant partners. Much of the information provided is BAG.

I used what I learned from communicating evaluation findings from the program evaluation in another evaluation.	2.30	2.00	54	1.18	2.43	2.00	119	1.09
Use (Knowledge, Products, Processes) Mean in Another Evaluation	2.55	2.50	54	.91	2.27	2.20	133	1.02

Use of Findings – ATE

The following eight questions (Q50 – Q58) referred to use of the program evaluation findings by project PI's, co-PI's and project staff. Only individuals whom we pre-identified by the program lists as PI's, Co-PIs, or project staff received the questions since the team reasoned that evaluators typically did not have the authority to use the findings like the internal project leadership.

Table 27. Use of Findings (PI Survey only)

Items 50-58	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**
I used the program evaluation findings to make decisions about the future existence of my project (e.g., cancel or continue).	Leaders	39.7%	15.2%	30.5%	14.6%	151
I used the program evaluation findings to develop future plans for my project.	Leaders	29.8%	19.9%	32.5%	17.9%	151
I used the program evaluation findings to increase the attention given to my project.	Leaders	37.5%	17.1%	29.6%	15.8%	152
I used the program evaluation findings to meet contractual and/or legal requirements of my project.	Leaders	35.8%	12.6%	26.5%	25.2%	151
I used the program evaluation findings to enhance my organization's commitment to my project.	Leaders	40.7%	14.7%	30.7%	14.0%	150
I used the program evaluation findings to seek funding for my project(s).	Leaders	54.7%	12.0%	20.7%	12.7%	150
I used the program evaluation findings to promote additional evaluation of my project(s).	Leaders	55.0%	16.6%	19.9%	8.6%	151
I used the program evaluation findings to make changes to my project(s).	Leaders	30.9%	23.0%	34.2%	11.8%	152
I used the program evaluation findings to help plan a new project(s).	Leaders	36.8%	22.4%	26.3%	14.5%	152

Influence of Evaluation on Larger Community – ATE

Table 29. ATE Influence on STEM Community

Role	Not influential at all	Marginally influential	Somewhat influential	Influential	Very influential	Total
Evaluators	18.2%	27.3%	18.2%	18.2%	18.2%	166
Leaders	10.8%	30.7%	31.3%	20.5%	6.6%	177
Total	11.3%	30.5%	30.5%	20.3%	7.3%	100%

Table 30. ATE Influence on Evaluation Community

	Not influential at all	Marginally influential	Somewhat influential	Influential	Very influential	Total
Evaluators	18.2%	18.2%	36.4%	18.2%	9.1%	11
Leaders	11.6%	31.7%	31.1%	19.5%	6.1%	164
Total	12.0%	30.9%	31.4%	19.4%	6.3%	175

Facilitators and Barriers to Influence – ATE

Table 31. Factors Enabling Evaluation Influence *

Item	*Selected Open-Ended Responses*
What major factors enabled the evaluation experience to influence you?	It was helpful to share ideas with colleagues who are also evaluators. This cross pollination was perhaps the best part of the process as we met and communicated at ATE**.**
	The process was transparent and collaborative.
	Openness of local folks to share information and to thoughtfully consider alternatives.
	The inclusion of a variety of members/evaluators/directors all participating and planning together.
	Team discussion. Meetings with the external evaluator.
	Ongoing discussion around each stage of evaluation.
	The training session in Michigan was useful for giving me, as a novice, a better understanding of the process and expectations. It was also essential that one of the evaluation project PIs met with me and the evaluation intern some time after we had left Michigan.
	Completing the forms annually drew my attention to collecting specific data on my project and reminded me what NSF might be looking for to show that the program is a success.

*44% or 82/104 responded

Table 32. Factors Limiting Evaluation Influence *

Item	*Selected Open-Ended Responses*
What major factors limited the influence the evaluation experience had on you?	The lack of succinct analysis and reporting of findings and any observable use of the data to improve the ATE program.
	We didn't get much feedback directly from Western Michigan, although they do have an extensive website. The attempts to engage many of the evaluators in an ongoing listserv didn't seem to be successful.
	The difference in numbers versus impact.
	Time constraints. Leadership's indifference to the evaluation process and outcomes.
	The diversity of ATE project innovations makes it extremely difficult to invent a common evaluation instrument that can adequately summarize the value of the entire program.
	My lack of prior experience was a limitation. The "tentativeness" of the intern was also a limiting factor.
	I have not received any feedback on the data we submitted or any feedback on our evaluation report. I also have not received any report of the findings of the overall evaluation. I have no idea what the overall evaluation plan is. I also would like an opportunity well ahead of the evaluation implementation stage to receive some long distance education on the ATE evaluation project, its goals and objectives and how project evaluation activities might be tailored to ensure that the Western Michigan team's evaluation questions can be answered.

34% or 64/186 responded

Inappropriate Use - ATE

Table 33. ATE Inappropriate Use

Item	No	Yes	Total
Are you aware of any inappropriate use of the ATE program evaluation?	170	7	177
	96.0%	4.0%	100.0%

Table 34. ATE Inappropriate Use

Item	*Selected Open-Ended Responses**
Comments on identified inappropriate evaluation use.	Yes, some people drop evaluation funding almost entirely during negotiations and in other cases do not meet the minimum requirements of the ATE solicitation, e.g. The creation of a National Visiting Board is required if funding is over 800,000 some do not fulfill this requirement. The NVB should be strictly enforced or dropped from the ATE solicitation entirely. It is creating the impression that evaluation is a disposable budget line item.
	The person misused evaluation funds, misused matching funds and failed to follow specific mandates such as no facilitator fees as part of the designated budget items. This person continued to become the next PI on the grant award after the evaluation process was completed.
	See answer to 60. (Answer 60: I feel strongly that NSF has decided to play defense against the Department of Education and members, official and unofficial of the current administration – to 'prove' that the Foundation is a research organization. While I feel that evaluation is important, the constant need to provide research findings can easily get in the way of programs that are essentially materials development. NSF has NOTHING to apologize for. Moreover, the critics calling for increased research and evaluation will not be appeased. The call is politically motivated and the persons making that call care nothing for truth or results. This is a trap that should be avoided at all costs.
	Methodology in early surveys created the impression of positive impact of the ATE program by dubious analysis and faulty reasoning. I believe this occurred in an effort to please ATE staff.
	I have never seen the program evaluation. I am confident that the evaluation of the program at Laney Community College does not reveal major problems within the project.
	Benchmarks sometimes do not align with research, making local projects engage in activities that are fruitless and disregarding important local accomplishments.

Involvement – CETP

Thirteen of the first 16 questions on the survey asked respondents about their perceptions of involvement during the planning, implementation and communication phases of the program evaluation. Each involvement question began with "I was involved in…." This section included a question at the end of each phase regarding the motivation for involvement. Results of the motivation questions (4, 11, & 16) are presented after the Involvement tables.

Evaluation Influence - CETP

The survey asked respondents to reflect on the extent of the influence the program evaluation had on their knowledge/understanding (Q25 - Q30), skills (Q31 – Q36), and beliefs (Q38 – Q43). Question 37 asked whether the evaluation had a negative impact and then offered space for a written explanation. The results for this question are presented before the Influence on Beliefs table.

Table 47. CETP Influence on Knowledge & Understanding

Items 25-30	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**

	Total	86.5%	13.5%	52

Negative Impacts – CETP

Table 52. Examples of Negative Impact

Item	*Selected Open-Ended Responses**
Examples of Negative Impacts	Only to the degree that evaluation data and analysis was not always considered when programmatic decisions were made. Political, practical, logistical and economic considerations often took precedence over the evaluation results when planning and implementing project activities.
	CETP projects were quite diverse, and each had already designed its own evaluation. The overall, NSF evaluation compared apples and oranges (which negates validity), and in the process stifled the local evaluation efforts.
	… I have some doubt about the capability of even a well-conceived, well-executed evaluation to lead to change in the academic climate of the university once the program has been completed and the money flow has stopped.

*14% or 7/54 responded

Influence on Beliefs – CETP

Use of Knowledge, Products, and Processes – CETP

The survey directed only respondents who had participated in a subsequent evaluation to respond to questions related to using the evaluation knowledge, products, or processes. If a respondent had not participated in another evaluation they were instructed to continue with question 50.

Table 55. CETP Use (Knowledge, Products, Processes) in another Evaluation

Items 45-49	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**
I used what I learned from planning the program evaluation in another evaluation.	Evaluators	18.8%	12.5%	37.5%	31.3%	16
	Leaders	13.3%	33.3%	20.0%	33.3%	15

Use of Findings – CETP

The following eight questions (Q50 – Q58) referred to use of the program evaluation findings by project PI's, co-PI's and project staff. Only individuals whom we pre-identified by the program lists as PI's, Co-PIs, or project staff received the questions since the team reasoned that evaluators typically did not have the authority to use the findings like the internal project leadership.

Table 57. CETP Use of Findings (PI Survey only)

Items 50-58	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**
I used the program evaluation findings to make decisions about the future existence of my project (e.g., cancel or continue).	Leaders	46.2%	11.5%	42.3%	100.0%	12
I used the program evaluation findings to develop future plans for my project.	Leaders	38.5%	23.1%	30.8%	7.7%	26
I used the program evaluation findings to increase the attention given to my project.	Leaders	38.5%	11.5%	38.5%	11.5%	26
I used the program evaluation findings to meet contractual and/or legal requirements of my project.	Leaders	46.2%	19.2%	23.1%	11.5%	26
I used the program evaluation findings to enhance my organization's commitment to my project.	Leaders	42.3%	11.5%	42.3%	3.8%	26
I used the program evaluation findings to seek funding for my project(s).	Leaders	65.4%	15.4%	15.4%	3.8%	26
I used the program evaluation findings to promote additional evaluation of my project(s).	Leaders	65.4%	7.7%	19.2%	7.7%	26
I used the program evaluation findings to make changes to my project(s).	Leaders	42.3%	23.1%	30.8%	3.8%	26
I used the program evaluation findings to help plan a new project(s).	Leaders	57.7%	19.2%	19.2%	3.8%	26

Facilitators and Barriers to Influence – CETP

Table 61. Factors Enabling Evaluation Influence

Item	*Selected Open-Ended Responses*
What major factors enabled the evaluation experience to influence you?	The national meeting, in Minnesota and Crystal City.
	The practical experiences in developing and implementing the evaluation…an endeavor very new to me… helped me to understand the process much better. Working closely with our CETP project evaluator and implementing the Core classroom observation tool gave me a much better understanding of the methodology and how the results could be focused and triangulated to obtain very useful data/conclusions. This was fun.
	The importance of STEM education and the enthusiasm of the participants.
	I was directly involved in the university academic program that was the most likely to be influenced by the project, as well as being part of the evaluation team, and I had sufficient influence to promote some of the changes suggested by the evaluation.
	The opportunity to travel to UM to meet with other PIs and evaluators and learn from what each project was doing influenced me. Also the training we received about the CETP evaluation was a key influencer as well.
	The face-to-face meetings with other evaluation personnel from the various CETP projects were extremely powerful. This provided context for the evaluation of my project within the whole CETP scope.

44% responded (82/104)

Table 62. Factors Limiting Evaluation Influence

Item	*Selected Open-Ended Responses**
What major factors limited the influence the evaluation experience had on you?	The degree to which the client used findings.
	Lack of time and resources to follow up on questions generated by the work. As new data arrived, we generated new questions, but had no time to investigate.
	I had limited experience with the nomenclature involved in education, particularly in "reform" techniques and pedagogy. Time was the barrier.
	It marginalized our own local evaluation efforts, which would have been much more relevant to our own project.
	The time pressure to complete the input of the evaluation data during a very busy time of the academic year limited how much I could reflect on the evaluation results.

*37% responded (20/54)

Inappropriate Use - CETP

Table 63. CETP Inappropriate Use

Item	No	Yes	Total
Are you aware of any inappropriate use of the ATE program evaluation?	52	1	53

Involvement – LSC

Thirteen of the first 16 questions on the survey asked respondents about their perceptions of involvement during the planning, implementation and communication phases of the program evaluation. Each involvement question began with "I was involved in…." This section included a question at the end of each phase regarding the motivation for involvement. Results of the motivation questions (4, 11, & 16) are presented after the Involvement tables.

1=No 2=Yes, a little 3=Yes, some 4=Yes, extensively

Evaluation Influence - LSC

The survey asked respondents to reflect on the extent of the influence the program evaluation had on their knowledge/understanding (Q25 - Q30), skills (Q31 – Q36), and beliefs (Q38 – Q43). Question 37 asked whether the evaluation had a negative impact and then offered space for a written explanation. The results for this question are presented before the Influence on Beliefs table.

Table 77. LSC Influence on Knowledge & Understanding

Items 25-30	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**
The evaluation increased my knowledge/ understanding of how to plan an evaluation.	Evaluators	16.7%	23.3%	30.0%	30.0%	30

Negative Impacts – LSC

Table 82. Examples of Negative Impact *

Item	*Selected Open-Ended Responses*
Examples of Negative Impacts	I am frustrated that the valuable information collected for evaluation purposes is often not made more widely available to the field of research.
	The national LSC evaluation was a very top-down approach, with little time or resource focused on using evaluation to improve programming at the local level. Any use of evaluation for improvement was a totally local responsibility.
	To the best of my knowledge, there was no official mechanism for sharing survey or observation results with the teachers and administrators who were being surveyed and observed. The experience was generally seen as a bunch of busy work by teachers and administrators. The time taken to do the HRI stuff detracted significantly from the teachers' overall project experience and our efforts to do project-specific research and evaluation.
	Only in that we had developed an evaluation for our project, but it was superseded by NSF with their program evaluation.
	I could see how the interest for lots of information competes with the limited time teachers and others have to provide this information in the context of all the other tasks they must complete as a part of their primary work. The evaluation process was so burdensome that it actually created some negative perceptions of the PD project. I did like the creative ways that some of the information was elicited, but it was way too long. Also the cost of the evaluation, given the extent of data collection, took a huge bite out of our funding. If we spent less to keep the project directed at the work of the project itself, we received very limited information from the evaluator.

Use of Findings – LSC

The following eight questions (Q50 – Q58) referred to use of the program evaluation findings by project PI's, co-PI's and project staff. Only individuals whom we pre-identified by the program lists as PI's, Co-PIs, or project staff received the questions since the team reasoned that evaluators typically did not have the authority to use the findings like the internal project leadership.

Facilitators and Barriers to Influence – LSC

Table 91. Factors Enabling Evaluation Influence*

Item	*Selected Open-Ended Responses*
What major factors enabled the evaluation experience to influence you?	The training programs at Horizon helped me move beyond being a novice. Inter-rater reliability discussions were invaluable.
	(1) Solid and systematic meetings with Horizon's Research staff who led the evaluation for the entire LSC project (2) Knowledgeable project director (PI).
	The annual training meetings held by Horizon; the quality of the presentations there; feedback we were given about our evaluation reports; the instruments.
	Access to data collection instruments when appropriate to our project.
	We were required to use HRI instruments - the survey and observation forms - so these obviously had considerable influence.
	The opportunities that HRI provided PDs to (1) have input into the design of the evaluation instruments, (2) meet and discuss annual results, and (3) the annual reports themselves, which synthesized results across projects.
	The various sources of data could be used to triangulate findings. Increasing their validity.

*59% or 52/73 responded

Table 92. Factors Limiting Evaluation Influence

Item	*Selected Open-Ended Responses*
What major factors limited the influence the evaluation experience had on you?	I only got feedback from Horizon if there was something wrong that needed fixing. I didn't get feedback about things that were done well that I should do again in another context.
	The evaluation was quite prescribed. I might have learned more had more of the components been up to me to design.
	Negative national atmosphere relating to new mathematical programs.
	Not enough time to implement the needed changes implied through the evaluation.
	The lack of interest our administration showed in the results of the evaluation. they did not seem to be very interested in the findings.
	Not having any input into the evaluation plan.
	Structure of HRI evaluation was so overarching it limited local evaluation to a significant degree. We could only ask individuals for so much information.

	97.2%	2.8%	100.0%

Table 94. Open-Ended Responses from those having seen inappropriate use

Item	*Selected Open-Ended Responses**
Comments on identified inappropriate evaluation use.	The process was used as a weapon to browbeat PI's into submission to a program of data collection that was not outlined prior to the submission of our application. This also meant that our budget did not reflect the funding of a very work-intensive study that was layered on top of our original work plan for PD. The first tier of awardees suffered the most from this lack of planning.
	The people at NSF ignored the results--at least for our LSC project.

Involvement – MSP- RETA

Thirteen of the first 16 questions on the survey asked respondents about their perceptions of involvement during the planning, implementation and communication phases of the program evaluation. Each involvement question began with "I was involved in…." This section included a question at the end of each phase regarding the motivation for involvement. Results of the motivation questions (4, 11, & 16) are presented after the Involvement tables.

Motivation for Involvement – MSP-RETA

The questions related to motivation asked respondents to choose an option (required, asked, or volunteered, was not involved) that best described the motivation for involvement during the specific evaluation stage (planning, implementing, or communication of findings.

Table 103. MSP-RETA Motivation – Planning

Influence on the Evaluation – MSP-RETA

Questions 17 – 22 asked about the perception of influence on the program evaluation, differentiating between consideration and actual use.

Table 106. MSP-RETA Influence on the Evaluation

1=No 2=Yes, a little 3=Yes, some 4=Yes, extensively

Evaluation Influence – MSP-RETA

The survey asked respondents to reflect on the extent of the influence the program evaluation had on their knowledge/understanding (Q25 - Q30), skills (Q31 – Q36), and beliefs (Q38 – Q43). Question 37 asked whether the evaluation had a negative impact and then offered space for a written explanation. The results for this question are presented before the Influence on Beliefs table.

Negative Impacts – MSP-RETA

Table 112. Examples of Negative Impact

Item	*Selected Open-Ended Responses**
Examples of Negative Impacts	I believe the NSF evaluation requirements are overly burdensome and time consuming. Project staff and money could and should be spent on project activities, not collecting micro data that no one really cares about. The evaluation requirements have killed more than one good project person. How many have to die before people understand?
	It seems that too often evaluation is used to garner evidence to prove a particular point that a party is invested in showing to be successful, as opposed to a true inquiry with the motivation of understanding an intervention to learn.

Use of Findings – MSP-RETA

The following eight questions (Q50 – Q58) referred to use of the program evaluation findings by project PI's, co-PI's and project staff. Only individuals whom we pre-identified by the program lists as PI's, Co-PIs, or project staff received the questions since the team reasoned that evaluators typically did not have the authority to use the findings like the internal project leadership.

Table 117. MSP-RETA Use of Findings (PI Survey only)

Items 50-58	***Role***	**No**	**Yes, a little**	**Yes, some**	**Yes, extensively**	**N**
I used the program evaluation findings to make decisions about the future existence of my project (e.g., cancel or continue).	Leaders	76.1%	4.3%	10.9%	8.7%	151

Facilitators and Barriers to Influence – MSP-RETA

Table 121. Factors Enabling Evaluation Influence

Item	*Selected Open-Ended Responses**
What major factors enabled the evaluation experience to influence you?	It was helpful to share ideas with colleagues who are also evaluators. This cross pollination was perhaps the best part of the process as we met and communicated at ATE.
	The process was transparent and collaborative.
	Openness of local folks to share information and to thoughtfully consider alternatives.
	The inclusion of a variety of members/evaluators/directors all participating and planning together.
	Team discussion. Meetings with the external evaluator.
	Ongoing discussion around each stage of evaluation.
	The training session in Michigan was useful for giving me, as a novice, a better understanding of the process and expectations. It was also essential that one of the evaluation project PIs met with me and the evaluation intern some time after we had left Michigan.
	Completing the forms annually drew my attention to collecting specific data on my project and reminded me what NSF might be looking for to show that the program is a success.

*44% or 82/104 responded

Table 122. Factors Limiting Evaluation Influence

Item	*Selected Open-Ended Responses**
What major factors limited the influence the evaluation experience had on you?	The lack of succinct analysis and reporting of findings and any observable use of the data to improve the ATE program.
	We didn't get much feedback directly from Western Michigan, although they do have an extensive website. The attempts to engage many of the evaluators in an ongoing listserv didn't seem to be successful.
	The difference in numbers versus impact.
	Time constraints. Leadership's indifference to the evaluation process and outcomes.
	The diversity of ATE project innovations makes it extremely difficult to invent a common evaluation instrument that can adequately summarize the value of the entire program.
	My lack of prior experience was a limitation. The "tentativeness" of the intern was also a limiting factor.
	I have not received any feedback on the data we submitted or any feedback on our evaluation report. I also have not received any report of the findings of the overall evaluation. I have no idea what the overall evaluation plan is. I also would like an opportunity well ahead of the evaluation implementation stage to receive some long distance education on the ATE evaluation project, its goals and objectives and how project evaluation activities might be tailored to ensure that the Western Michigan team's evaluation questions can be answered.

*34% or 64/186 responded

Table 124. Open-Ended Responses from those having seen inappropriate use

Item	*Selected Open-Ended Responses**
Comments on identified inappropriate evaluation use.	Yes, some people drop evaluation funding almost entirely during negotiations and in other cases do not meet the minimum requirements of the ATE solicitation, e.g. The creation of a National Visiting Board is required if funding is over 800,000 some do not fulfill this requirement. The NVB should be strictly enforced or dropped from the ATE solicitation entirely. It is creating the impression that evaluation is a disposable budget line item.
	The person misused evaluation funds, misused matching funds and failed to follow specific mandates such as no facilitator fees as part of the designated budget items. This person continued to become the next PI on the grant award after the evaluation process was completed.
	See answer to 60. (Answer 60: I feel strongly that NSF has decided to play defense against the Department of Education and members, official and unofficial of the current administration – to 'prove' that the Foundation is a research organization. While I feel that evaluation is important, the constant need to provide research findings can easily get in the way of programs that are essentially materials development. NSF has NOTHING to apologize for. Moreover, the critics calling for increased research and evaluation will not be appeased. The call is politically motivated and the persons making that call care nothing for truth or results. This is a trap that should be avoided at all costs.
	Methodology in early surveys created the impression of positive impact of the ATE program by dubious analysis and faulty reasoning. I believe this occurred in an effort to please ATE staff.
	I have never seen the program evaluation. I am confident that the evaluation of the program at Laney Community College does not reveal major problems within the project.
	Benchmarks sometimes do not align with research, making local projects engage in activities that are fruitless and disregarding important local accomplishments.
