Partnerships In Wellness

Sheryl Larson, Ph.D., Lynda Anderson, M.A./M.P.H.

INTRODUCTION

• Adults with intellectual or developmental disabilities, like the U.S. population as a whole, face challenges in establishing and maintaining healthy, active lifestyles. This population, however, is more likely than the general public to live with complex health conditions, have limited access to health promotion programs, to report inadequate levels of physical activity, and for some subpopulations, to be overweight or obese

•This project targets adults with IDD who require on-going daily supports, have limited or no reading skills and who would benefit from learning about improved nutrition and active living.

•We will simultaneously train people with IDD and their support staff and/or family members.

• The curriculum incorporates multiple learning modalities such as video and audio and will be developed using Universal Design principles and Universal Design for Learning Guidelines.

• Individuals with disabilities are involved in all aspects of the project including as advisory committee members, and as co-trainers.

CURRICULUM DEVELOPMENT

•Advisory committee consists of self-advocates, family members, direct support professionals, social service agency managers, and content area experts in nutrition, kinesiology, public health and occupational therapy.

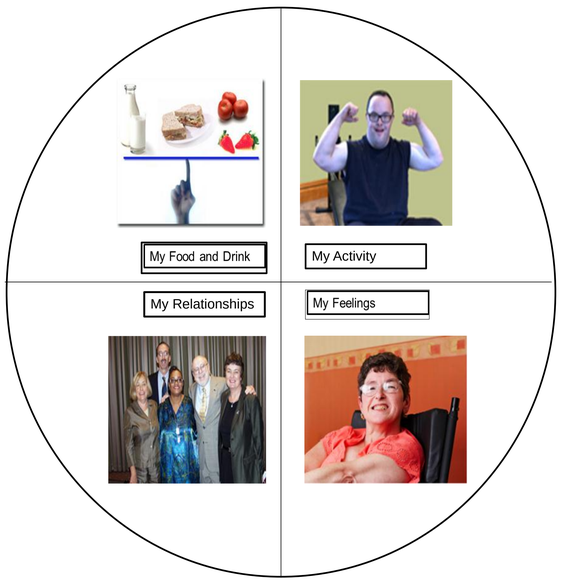

•Developed using ADDIE Instructional Design Model

- Analyze- needs assessment
- Design – structured focus group with advisory committee to develop content areas, learning goals and learning activities
- Develop – write curriculum
- Implement – pilot curriculum
- Evaluate – assess content and activities and re-write as needed

CURRICULUM OUTLINE

•Lesson 1: Introduction – creating partnerships and understanding wellness
•Lesson 2: Physical activity – understanding exercise recommendations
•Lesson 3: Physical activity – building movement into daily activities
•Lesson 4: Nutrition – understanding nutrition guidelines
•Lesson 5: Nutrition – what makes a healthy plate
•Lesson 6: Relationships – sense of belonging, building connections
•Lesson 7: Feelings – identifying feelings, managing stress
•Lesson 8: Setting goals – goal setting and monitoring strategies

ACTIVITY EXAMPLE

- Each group should have two very large “my food” templates.
- Each group should have an array of food photos available.
- The groups will plan two meals –lunch and dinner – one at a time. Each pair will pick an item to fill a portion of the plate – either the fruit, vegetables, protein, grains, or dairy section.
- Start with one pair and ask them to fill the protein section for lunch by choosing a food item
- Have another pair pick the fruit for lunch. Add this to the existing categories on the board.
- Once all pairs have chosen items for lunch, move on to dinner. Have pairs choose different sections for each meal.
- The groups will share the meals they planned.

LESSONS LEARNED FROM PILOT

•Partners need to be invested in process.

•Transition time at beginning is important.

•At-home activities need to be simple and short.

•Conduct group sessions at appropriate community locations
(e.g., grocery store).
