Research Timeline

Family language policy and bilingual parenting

Kendall A. King University of Minnesota
kendall@umn.edu

Lyn Wright Fogle Mississippi State University
ewf30@msstate.edu

While the study of bilingual development among children dates back roughly a century (Leopold 1939–49; Ronjat 1913[1]), a defined research focus on family language policy is relatively new. Family language policy (FLP) links studies of child language acquisition and early second language learning and bilingualism with the field of language policy. FLP examines language policy in relation to language use and language choice within the home among family members (King, Fogle & Logan-Terry 2008). This line of inquiry differs from more psycholinguistically oriented investigations of bilingualism; rather than targeting the child, the emphasis of FLP is on the balance between and use of languages within the family unit. Thus, FLP addresses child language learning and use as functions of parental ideologies, decision-making and strategies concerning languages and literacies, as well as the broader social and cultural context of family life.

The interdisciplinary field of FLP draws from anthropology (and work on language socialization in particular) and sociolinguistics (specifically, discourse analysis) while also incorporating traditional psychological approaches to bilingualism. While FLP is still coalescing as a field, there have already been several notable shifts. The first of these is increased focus on and intentional inclusion of a broader, more diverse range of family types, languages, and social contexts. While FLP research has tended to document two-parent, middle-class homes in which children are acquiring more than one European language (Métraux 1965; Lanza 1992), current work explores how these processes play out within minority language and/or non-traditional (e.g. adoptive, single-parent) families in transnational or diasporic contexts (Canagarajah 2008). Second, the last ten years of FLP research have been marked by increased emphasis on the family as a dynamic system, including the importance of child agency and identity choices, both enacted through language (Okita 2001; Gafaranga 2010). Third, current work in FLP gives greater emphasis to trilingualism or multilingualism, with a growing number of studies examining how families manage multiple languages (Lanza & Svendsen 2007; Curdt-Christiansen 2009).

[1] Ronjat's text is well known for supporting and popularizing Grammont's 'one-person-one-language' (OPOL) approach as a means to achieve balanced bilingualism, an approach which has been recommended, debated, and studied for 100 years.

CAMBRIDGE JOURNALS
http://journals.cambridge.org Downloaded: 25 Feb 2013 IP address: 134.84.183.88

Our timeline focuses on empirical research into FLP. In particular, we include the most influential accounts which link parental language policies, strategies, or ideologies with child outcomes in terms of language competencies, identity, or use. Our empirical focus means that we have left aside some highly influential theoretical, sociological, and historical works such as Fishman's *Reversing language shift* (1991), which illustrated the importance of FLP and intergenerational transmission for language survival. We also exclude the many studies of child bilingual development that give little empirical attention to parental language use (for this, see Barac & Bialystok's 2011 *Research Timeline*, 'Cognitive development of bilingual children'). Rather, the focus here is on studies that examine the management of more than one language in the family context; this includes studies of homes in which parents use multiple languages as well as examinations of monolingual policies within immigrant families or international adoptive families that have not shifted to the majority language at home. In all cases, however, the children have the potential to become bilingual because of environmental factors.

We intentionally exclude parent-oriented 'how to' manuals (e.g. Barron-Hauwaert 2004, 2012; King & Mackey 2007; Zurer Pearson 2008) and textbooks on bilingualism (e.g. De Houwer 2009), as these are not directed at a research audience, but instead aim to make research related to bilingualism and second language learning widely accessible. We do, however, include reports by parents of their own children's language development, as in some cases these have been foundational and influential for academic research. We also include accounts of multilingual development, although this is not highlighted in a separate section.

This timeline organizes the FLP literature into three categories, noted in the final column of the timeline:

A First-person, parental accounts of bilingual child-rearing and FLP
B Social, cultural, and ideological influences on bilingual child-rearing and FLP
C Relationship between FLP and child outcomes
  C1 Relationship between FLP and child language proficiency
  C2 Relationship between FLP and child social identity or cultural attitudes
  C3 Relationship between FLP and child language use in the home

As FLP matures as a field of study, we expect to see greater focus placed on the sociocultural factors influencing parents and families and sharper attention paid to the impact of children on family language policy processes. With increased attention on the greater number of families participating in migratory and transnational flows, the field of FLP will help us understand the linguistic and social worlds of young children, most of whom – when we look worldwide – are shaped by, and also shape, their multilingual contexts.

KENDALL A. KING is Professor of Second Languages and Cultures at the University of Minnesota. Her research addresses social, cultural, and political aspects of second language learning and bilingualism, with particular attention to minority and endangered languages in the United States and Latin America. Her most recent articles appear in *Applied Linguistics*, *Linguistics and Education*, and *Discourse Studies*. She is Editor of the journal *Language Policy* (Springer).

LYN WRIGHT FOGLE is an Assistant Professor of Linguistics and TESOL at Mississippi State University. Her research focuses on identity and ideology in second language learning. Her book, *Second language socialization and learner agency: Talk in three adoptive families* (Multilingual Matters), investigates language learning in transnational adoptive families.

YEAR	REFERENCES	ANNOTATION	THEME
1965	Métraux, R. (1965). A study of bilingualism among children of US–French parents. *The French Review* 38.5, 650–665.	**Métraux** conducted an open-ended survey of 25 US mothers, all married to French nationals and residing in Paris. Maternal reports indicated that the degree of child bilingualism varied widely, depending on child age and opportunity to use both languages. Métraux provided a detailed account of maternal reports of variation in practices (e.g. explicit language teaching vs. no definite plans); challenges in promoting bilingualism (e.g. child shyness or resistance); family language use patterns (e.g. one language for 'scolding'), and language attitudes within the immediate and extended family. Subsequent researchers later examined many of these same issues empirically in greater depth.	**B, C1, C2, C3**
1980	Saunders, G. (1980). Adding a second native language in the home. *Journal of Multilingual and Multicultural Development* 1.2, 113–144.	**Saunders** reported on a longitudinal study of English–German bilingualism in two Australian-born children who use German with their father and English with their mother. The author assessed fluency and accuracy with story-telling tasks and in free speech, and gauged receptive vocabulary using standardized measures. Saunders found that parental perseverance and patience can overcome child reluctance, and that the 'one-person-one-language' (OPOL) home environment is conducive to bilingualism with no adverse effect on 'family harmony'.	**A, C1, C3**
1981	Harrison, G., W. Bellin & B. Piette (1981). *Bilingual mothers in Wales and the language of their children*. Cardiff: University of Wales Press.	**Harrison, Bellin & Piette** investigated the question of why some bilingual mothers in Wales rear monolingual (English-speaking) children. Fieldworkers recruited 300 mothers to respond to an in-person questionnaire. The authors reported that bilingual mothers raised English-speaking children because of the greater pressure and support for English. Findings suggested that nearly all mothers favored Welsh maintenance, but were ill-informed on issues of language development.	**B, C1**

YEAR	REFERENCES	ANNOTATION	THEME
1981	Søndergaard, B. (1981). Decline and fall of individual bilingualism. *Journal of Multilingual and Multicultural Development* 2.4, 297–302.	**Søndergaard** critiqued SAUNDERS[2] (1980), challenging the value and appropriateness of the OPOL approach and questioning the merits of parental case studies.	**A, C1, C3**
1982	Saunders, G. (1982). Infant bilingualism: A look at some doubts and objections. *Journal of Multilingual and Multicultural Development* 3.4, 277–292.	**Saunders** responded here to SØNDERGAARD's (1981) critiques of SAUNDERS (1980), describing his own children's (successful) ongoing bilingual and biliterate development, and defending the value and benefits of parental research on their own children's language development.	**A, C1, C3**
1985	Fantini, A. E. (1985). *Language acquisition of a bilingual child: A sociolinguistic perspective*. Clevedon, UK: Multilingual Matters.	**Fantini** studied the development of his own child (Mario) from birth through age six (and then, sporadically, to age ten) through direct observation and occasional audio-recordings. Analysis focused on early second language acquisition, with detailed attention to parental exposure and varied social contexts over time. This case study pointed to the ways in which dual acquisition was not observably different from monolingual acquisition. Fantini argued that what was different was Mario's use of the two languages based on environmental cues and social factors.	**A, C1**
1985	Hoffman, C. (1985). Language acquisition in two trilingual children. *Journal of Multilingual and Multicultural Development* 6, 479–495.	**Hoffman** described the language development of her two trilingual, Spanish–German–English-speaking children. While the children were exposed to Spanish and German from birth, they were introduced to English later and under different conditions (television and preschool). The author described the similarities in the children's patterns of acquisition of German and Spanish, and the differences in their English learning patterns, which she attributed to social, environmental, and personality factors. This was one of the first longitudinal parental reports of trilingual development.	**A, C1**

YEAR	REFERENCES	ANNOTATION	THEME
1987	Evans, M. (1987). Linguistic accommodation in a bilingual family: One perspective on the language acquisition of a bilingual child being raised in a monolingual community. *Journal of Multilingual and Multicultural Development* 8, 231–235.	**Evans** reported on linguistic accommodation in the context of rearing one English–Welsh bilingual child (1;0–6;6). The father used his first language (Welsh) at home; the mother had learned some Welsh to use with the child. Evans described how the father accommodated to the linguistic errors in Welsh of both mother and child, including pronouns of address, mutations, gender, possessive adjectives, and tenses. The author suggested that this accommodation might have impoverishing effects on child language development.	**A, C1, C3**
1988	Döpke, S. (1988). The role of parental teaching techniques in bilingual German–English families. *International Journal of the Sociology of Language* 72, 101–112.	**Döpke** investigated the teaching techniques used by German-speaking parents with children exposed to the OPOL approach in Australia. She concluded that children in families in which the input in German was of higher quality and in which German was used more than English were best able to encourage German production from the children.	**C1, C3**
1988	Saunders, G. (1988). *Bilingual children: From birth to teens*. Clevedon, UK: Multilingual Matters.	**Saunders** documented the bilingual development of his three English–German-speaking children, and provided insight into individual variation across children as well as how languages fit into family dynamics and the broader community. This was one of the first studies to take a longitudinal family-based perspective.	**A, B, C1, C3**
1989	Goodz, N. (1989). Parental language mixing in bilingual families. *Infant Mental Health Journal* 10.1, 25–44.	**Goodz** examined the language input of young children growing up within French–English bilingual families. Parent–child dyads were visited at home and audio-recorded every 3–6 weeks over a 19–36 month period. Goodz found that in all homes, including those with parents who expressed a firm commitment to a strict separation of languages by parent, linguistically mixed utterances were common. This finding suggested that children's early language mixing did not reflect inter-linguistic confusion, but rather environmental exposure.	**C1, C3**

http://journals.cambridge.org Downloaded: 25 Feb 2013 IP address: 134.84.183.88

YEAR	REFERENCES	ANNOTATION	THEME
1991	Lyon, J. (1991). Patterns of parental language use in Wales. *Journal of Multilingual and Multicultural Development* 12, 165–183.	**Lyon** surveyed the language use of 400 North Wales mothers and their partners. Expanding on HARRISON, BELLIN & PIETTE (1981), Lyon examined factors associated with parental language use, including cross-language partnerships, past educational medium, and reported language use patterns. Lyon reported that within two-parent homes, the language competencies of the father have the greater influence on language use in the home.	**C1, C3**
1991	Sirén, U. (1999). Minority language transmission in early childhood. *International Journal of Early Years Education* 3.2, 75–84.	**Sirén** conducted repeat surveys with minority language parents in Sweden. Parents responded to questions about language intentions during pregnancy and to questions about parental and child language use when children were 2;6 and 4;0. Sirén found that parents tended to continue to speak their minority languages with children, but argued that greater support of children's mother tongue in state-sponsored day care is warranted, to support transmission.	**B, C3**
1992	Döpke, S. (1992). *One parent one language: An interactional approach*. Amsterdam and Philadelphia, PA: John Benjamins.	**Döpke** studied the bilingual acquisition of six children (four girls and two boys, ages 2;8 and 4;2 at study start) growing up in German–English bilingual families in Australia. This study focused on the effectiveness of the OPOL approach, and aimed to find features in the children's 'verbal environments' that led to active command of the minority language (i.e. German) vs. receptive skills alone. Döpke found that parents' child-centeredness, or their orientation to promoting the child as a conversational partner, was related to the children's degree of bilingualism.	**C1**

YEAR	REFERENCES	ANNOTATION	THEME
1992	Kulick, D. (1992). *Language shift and cultural reproduction: Socialization, self and syncretism in a Papua New Guinean village*. Cambridge: Cambridge University Press.	**Kulick** conducted an ethnographic study of language shift in Gapun, Papua New Guinea, where the local language, Taiap, was being replaced by the majority language, Tok Pisin. Kulick connected the daily interactions of caregivers with children in the community to attitudes toward language, children, change, and personhood to show the multiple factors involved in language shift. This book is often cited as one of the first detailed documentations of the family-internal and interactional mechanisms of language shift and loss (see ZENTELLA 1997, for greater emphasis on social and political forces). Kulick was also among the first to draw attention to the role of children's agency in promoting linguistic accommodation and language shift.	**B, C1, C2, C3**
1992	Lanza, E. (1992). Can bilingual two-year-olds code-switch? *Journal of Child Language* 19.3, 633–658.	**Lanza**'s groundbreaking study (cf. LANZA 1997/2004) took a language socialization and discourse analytic approach to the question of child bilingualism, addressing an important question in psycholinguistic approaches to bilingualism: does language differentiation occur before the age of three? Expanding on GOODZ's past (1989) quantitative work, Lanza demonstrated, through detailed analysis of parent-child interaction, that language mixing before the age of three is contextually sensitive; that is, the children responded to parental strategies that shaped language choice in interaction. She found that parental strategies shape even very young children's bilingual outcomes and that two-year-olds can indeed code-switch. Lanza concluded that language mixing is primarily a sociolinguistic, rather than a psycholinguistic, phenomenon.	**C1, C3**

YEAR	REFERENCES	ANNOTATION	THEME
1994	Goodz, N. (1994). Interactions between parents and children in bilingual families. In F. Genesee (ed.), *Educating second language children*. Cambridge: Cambridge University Press, 61–81.	**Goodz** reported on a longitudinal study of 13 French–English bilingual families (initiating at 1;1–1;3). Parent–child language samples were collected at home roughly every six weeks over three to four years. Goodz found that young bilinguals mixed languages and that this mixing increased in some contexts/cases as children aged; that rate of acquisition varied across languages (although participants said their first words and first multi-word combinations at the same time as monolinguals); and that parents frequently switched into their non-native language, as reported in GOODZ (1989). This study considered the role of fathers in particular (see LYON 1991), and Goodz interpreted these findings as suggesting that 'the bilingual family situation facilitates "fine-tuning" in paternal speech' (p. 75).	**C1**
1994	Wei, L. (1994). *Three generations, two languages, one family*. Clevedon, UK: Multilingual Matters.	**Wei**'s book reported on a sociolinguistic study of language behavior of multiple generations of Chinese residents of Tyneside, north-east England. **Wei** analyzed the language choice and language abilities of 58 speakers in ten Chinese families as well as their social networks and related language choice and code-switching patterns. This work pointed to the importance of social networks in determining family language choices and transmission patterns.	**B, C3**
1995	Pan, B. A. (1995). Code negotiation in bilingual families: 'My body starts speaking English'. *Journal of Multilingual and Multicultural Development* 16, 315–328.	**Pan** investigated at a micro-interactional level how children introduced the majority language into parent–child interaction in Mandarin–English bilingual homes. Pan audio-taped ten parent–child dyads reading a wordless book together and at family mealtime. Children were found to use more English than their parents and to code-switch more frequently in the Chinese-to-English direction. Pan noted that code-switching is not always the result of conscious 'policy-making', but that such switching occurs without speakers' awareness. The study pointed to an inherent conflict between parents' desire to maintain a heritage language and their tendencies to accommodate to their children (see also EVANS 1987).	**C3**

CAMBRIDGE JOURNALS

YEAR	REFERENCES	ANNOTATION	THEME
1995	Yamamoto, M. (1995). Bilingualism in international families. *Journal of Multilingual and Multicultural Development* 16, 63–85.	**Yamamoto** investigated bilingual parenting in Japanese international families where one parent spoke Japanese and the other English. Most participating families chose to use one language at home (usually the minority language, English) rather than OPOL, a trend that was attributed to positive attitudes toward bilingualism. Findings indicated that language use patterns varied with interlocutor. Yamamoto concluded that lack of support for biliteracy and a perceived taboo over 'conspicuousness' – the visibility of bilingual international families in Japan – were major concerns.	**B, C1, C2, C3**
1996	Lyon, J. (1996) *Becoming bilingual. Language acquisition in a bilingual community*. Clevedon, UK: Multilingual Matters.	Expanding on LYON (1991), eight families with different language use profiles were selected for follow-up audio-recording. Lyon focused on parental opinions in relation to children's bilingual outcomes as well as the gender of the minority-language-speaking parent. She found that maternal language choice was the best predictor of the child's competence by the age of three. However, fathers played a greater role in determining the family language. Children were found to develop metalinguistic awareness before the age of three.	**B, C3**
1997/2004	Lanza, E. (1997/2004). *Language mixing in infant bilingualism*. Oxford: Oxford University Press.	Lanza's work on English–Norwegian-speaking families in Norway established a framework, drawing on language socialization and discourse analytic approaches, for understanding bilingual parenting and children's bilingual outcomes (cf. LANZA 1992). This book provided detailed analysis of parental interactional strategies, particularly in response to children's language-mixing, and showed that the resulting discourse context shaped children's bilingualism. Lanza's study provided a framework for analyzing and understanding how parents' input, and, importantly, their reaction to children's mixing, led to different bilingual outcomes, hence extending the work of PAN (1995) and YAMAMOTO (1995).	**C3**

http://journals.cambridge.org Downloaded: 25 Feb 2013 IP address: 134.84.183.88

YEAR	REFERENCES	ANNOTATION	THEME
1997	Schecter, S. & R. Bayley (1997). Language socialization practices and cultural identity: Case studies of Mexican-descent families in California and Texas. *TESOL Quarterly* 31, 513–541.	**Schecter & Bayley** examined the language socialization practices of four Mexican-descent families in the USA. Analysis of interviews and 25 hours of recorded data per family found that children identified strongly with their Mexican heritage. However, families oriented themselves in varying degrees to the Spanish language and engaged in different Spanish-language practices. Two families explicitly and aggressively promoted the maintenance of Spanish at home, while the family that had moved most fully into the middle class was the least successful at establishing intergenerational transmission.	**B, C1, C2, C3**
1997	Zentella, A. C. (1997). *Growing up bilingual: Puerto Rican children in New York.* Malden, MA: Blackwell Publishers.	**Zentella**'s ten-year ethnography of a Puerto Rican community in New York City detailed how community bilingualism affected children's language use and development. This book examines the social identity of being 'Nuyorican' relative to children's code-switching practices and the syntactic features and discourse strategies of 'Spanglish'. Zentella focused on the social and academic lives of children from twenty bilingual homes, emphasizing the children's creativity and linguistic strengths. Zentella also pointed to the social and economic inequities that intersect with language policy and planning in these homes and brought to light educational policies that did not serve this population of learners.	**B, C1, C2, C3**
1998	De Houwer, A. (1998). Environmental factors in early bilingual development: The role of parental beliefs and attitudes. In G. Extra & L. Verhoeven (eds.), *Bilingualism and migration.* New York: Mouton de Gruyter, 75–96.	**De Houwer** argued for the importance of research into parental beliefs and attitudes, as these shape the context of language learning and child development. She suggested that parental beliefs and attitudes largely determine parental language choices and interactional strategies at home, which in turn influence children's language development. De Houwer noted that these relationships are complex and not uni-directional.	**B, C1**

http://journals.cambridge.org Downloaded: 25 Feb 2013 IP address: 134.84.183.88

YEAR	REFERENCES	ANNOTATION	THEME
1998	Döpke, S. (1998). Can the principle of 'one person one language' be disregarded as unrealistically elitist? *Australian Review of Applied Linguistics* 21.1, 41–56.	**Döpke** reviewed the critiques of the OPOL approach to bilingual child rearing, which suggested that it is elitist, atypical of bilinguals, unrealistic, and not reliably effective (SØNDERGAARD 1981). Döpke then argued for the applicability of OPOL to different family types, suggesting that OPOL was not a strategy but a 'language choice framework' that provided a macro-structure, in turn realized through micro-structure interactional moves.	**C3**
1998	Kasuya, H. (1998). Determinants of language choice in bilingual children: The role of input. *International Journal of Bilingualism* 2.2/3, 327–346.	**Kasuya** conducted a longitudinal study of four English–Japanese bilingual boys to explore how parental input patterns related to children's language use. All parents claimed to use the OPOL approach. This study found that more explicit strategies promoted more minority language production for children, and that children's choice of Japanese was related to parents' consistency in speaking Japanese (following LANZA 1997/2004). Kasuya also found that parents who claimed to use OPOL did not necessarily divide their languages strictly.	**C1**
1998	Varro, G. (1998). Does bilingualism survive the second generation? Three generations of French–American families in France. *International Journal of the Sociology of Language* 133, 105—128.	**Varro** examined the language practices of second and third generation French–Americans in France. Analysis of 89 survey responses (reporting on 169 adult children and 60 grandchildren) indicated that the youngest (roughly, 'third') generation was for the most part exposed mainly to French. Varro suggests that the gender of the second generation child is important, with women maintaining the minority language (here, English) more often than men.	**B, C1**
1999	Deuchar, M. & S. Quay (1999). Language choice in the earliest utterances: A case study with methodological implications. *Journal of Child Language* 26, 461—475.	This study reported on the ability of one Spanish–English bilingual child (**Deuchar**'s daughter) to switch languages appropriately according to context at the age of 1;7–1;8. The authors argued that such findings are not possible without detailed records of the child's lexicon and data collection in more than one language context, thus demonstrating the importance of a case-study approach to childhood bilingualism.	**A, C1, C3**

1999	Li, X. (1999). How can language minority parents help their children become bilingual in familial context? A case study of a language minority mother and her daughter. *Bilingual Research Journal* 23.2/3, 211–224.	**Li** conducted a case study of her daughter, Amy, who immigrated to Hawai'i from China at the age of 12. Li examined Amy's concurrent English language development and maintenance of the heritage language, Chinese. The study analyzed diary reports and audio-recorded conversations between mother and daughter over the first five months of their life in Hawai'i. The study concluded that parents' positive attitudes toward the minority language are key in bilingual development (cf. DE HOUWER 1998), and also showed that talking about language between parent and child can have positive effects on academic development.	**A, C1, C2**
1999	Patterson, J. (1999). What bilingual toddlers hear and say: Language input and word combinations. *Communication Disorders Quarterly* 21.1, 32–38.	**Patterson** analyzed parental reports of language input and word combinations of 102 toddlers with exposure to English and Spanish. While most parents reported using both English and Spanish with their children, one-third reported using only one language with them. These reported differences in parental language use did not correspond to reported child use of language mixing or word combinations. Patterson uses these findings to suggest that the OPOL approach does not promote differential language skills and might even violate community norms of interaction.	**C1, C3**
1999	Tuominen, A. (1999). Who decides the home language? A look at multilingual families. *International Journal of the Sociology of Language* 140, 59–76.	**Tuominen** surveyed the parental language practices of 18 bi- or multilingual families (25 parents), and found that parents' educational level and socioeconomic status were related to use of the minority language in the home. However, it was children who most often determined the language of the home and influenced a shift toward the majority language. Tuominen concluded that community support for minority languages is key.	**B, C3, C1**

YEAR	REFERENCES	ANNOTATION	THEME
2000	Deuchar, M. & S. Quay (2000). *Bilingual acquisition: Theoretical implications of a case study*. Oxford: Oxford University Press.	Expanding on DEUCHAR & QUAY (1999), this study focused on the bilingual development of multiple linguistic features within the second year of life. **Deuchar & Quay** found that there was no avoidance of synonymy in early word-learning; and that the child was able to make 'appropriate language choices' by the age of 1;7 and appeared to have differentiated language systems. The book includes detailed discussion of the mother's use of Spanish in different contexts as well as conclusions about the importance of input and parental code-switching strategies.	**A, C1, C3**
2000	Kouritzin, S. G. (2000). A mother's tongue. *TESOL Quarterly* 34, 311–324.	**Kouritzin** described the personal challenges of using her non-dominant language (Japanese) with her children in the effort to promote their Japanese proficiency. She drew parallels between her position as a non-native Japanese speaker with that of non-English-speaking immigrant parents in the USA whose children become English-dominant. Her article calls attention to the emotional 'costs' of bilingual child-rearing and the importance of the broader social and cultural context, a theme picked up in subsequent work (e.g. OKITA 2001).	**A, B**
2001	Juan-Garau, M. & C. Perez-Vidal (2001). Mixing and pragmatic parental strategies in early bilingual acquisition. *Journal of Child Language* 28, 59–86.	**Juan-Garau & Perez-Vidal** followed one Catalan–English bilingual boy, whose parents used the OPOL approach, over three years (1;3–4;2). The Catalan-speaking mother negotiated a bilingual context with her son, while the English-speaking father negotiated a primarily monolingual context. This pattern preserved the minority language, English, and helped the child achieve balanced bilingualism (following LANZA 1997/2004). They also found that the child's own language development, following a trip to the UK, helped shape the father's strategies. The sociolinguistic context of Catalonia, where bilingualism was a norm, as well as an extended period of time spent with the English-speaking father, also played a role.	**B, C1, C3**

YEAR	REFERENCES	ANNOTATION	THEME
2001	King, K. A. (2001). *Language revitalization processes and prospects: Quichua in the Ecuadorian Andes*. Clevedon, UK: Multilingual Matters.	**King**'s ethnography documented family, educational, and community efforts to revitalize the Quichua language in two indigenous Andean communities of southern Ecuador. She analyzed the linguistic, social, and cultural processes of language shift towards Spanish as well as attempts to move back toward Quichua, thus extending past work which had focused on contexts of language loss (e.g. KULICK 1997). Despite stated parental aims of promoting balanced bilingualism (combined with some teaching of Quichua in the home in school), children were overwhelmingly Spanish-dominant, Quichua language use being restricted to a small set of specific domains and functions.	**B, C1, C3**
2001	Okita, T. (2001). *Invisible work: Bilingualism, language choice and childrearing in intermarried families*. Amsterdam: John Benjamins.	**Okita** described the social context and experiences of Japanese–English bilingual parenting in England. The author focused on the pressures and demands faced by Japanese mothers, who were solely responsible for their children's Japanese and English language and literacy development; see KOURITZIN 2000). Through qualitative research using interviews, Okita showed how this 'invisible work' and 'pro-activist' mothering is largely unrecognized (both by society and within the family). This account was one of the first book-length treatments of child bilingualism to draw attention to the experience of mothers and the importance of the broader cultural and social context in (largely negatively) shaping that experience.	**B**
2001	Yamamoto, M. (2001). *Language use in interlingual families: A Japanese–English sociolinguistic study*. Clevedon, UK: Multilingual Matters.	**Yamamoto** examined language use among Japanese–English interlingual families in Japan, through questionnaires with 118 families and follow-up interviews with six. Findings highlighted the importance of societal values and language ideologies in shaping language choice as well as the need for 'maximal engagement with the minority language'. Yamamoto attempted to explain what factors influence familial language choice and to provide a predictive model of language use.	**B, C3**

YEAR	REFERENCES	ANNOTATION	THEME
2003	Luykx, A. (2003). Weaving languages together: Family language policy and gender socialization in bilingual Aymara households. In R. Bayley & S. Schecter (eds.), *Language socialization in bilingual and multilingual societies*. Clevedon, UK: Multilingual Matters, 25–43.	**Luykx** examined intersections of bilingual language socialization and gender socialization in Aymara-speaking Bolivian households. She investigated patterns of socialization and use of Aymara vs. Spanish within the home as well as outside the home in boys' peer groups, ritual gatherings, and public meetings, among other contexts. Following KULICK (1997), Luykx (2003: 41) concluded that family language planning and socialization are dynamic processes and that socialization should not be viewed 'as a one-way process, but as a dynamic network of mutual family influences'.	**C2**
2004	Martínez-Roldán, C. M. & G. Malavé (2004). Language ideologies mediating literacy and identity in bilingual contexts. *Journal of Early Childhood Literacy* 42, 155–180.	**Martínez-Roldán & Malavé** conducted a case study of a seven-year-old Mexican-American student and his family to show how language ideologies, identities, and literacy development intersect. This study emphasized the importance of parents' beliefs in early biliteracy development and concluded that the de-emphasis of language heritage and deprecation of speakers' own ethnic background, associated with wider societal discourses, were major factors in the failure of efforts to promote childhood bilingualism.	**C2**
2005	Shin, S. J. (2005). *Developing in two languages: Korean children in America*. Clevedon, UK: Multilingual Matters.	**Shin** drew on four data sets (classroom interactions, experimental language data, parental surveys, and follow-up interviews) to investigate bilingual rearing of school-aged children in Korean-American immigrant families. Shin argued that heritage languages have an important place in mainstream classrooms and that code-switching serves important interactional functions for bilingual children. The book makes suggestions for system-wide educational policy and heritage language maintenance.	**B, C1, C2**

YEAR	REFERENCES	ANNOTATION	THEME
2006	Caldas, S. J. (2006). *Raising bilingual-biliterate children in monolingual cultures.* Clevedon, UK: Multilingual Matters.	**Caldas** traced his three children's French–English language development over 19 years. (Caldas is a native English-speaker from Louisiana; his wife is a native French speaker from Quebec.) Unlike most prior work, which had examined young children, Caldas focused on his children's preteen and teen years (11–19). The book emphasizes his children's attitudes towards French and English and analyzed the crucial role of peers and friendship networks in shaping the children's shifting language use patterns and preferences over time.	**A, B, C1, C2, C3**
2006	Cruz-Ferreira, M. (2006). *Three is a crowd?: Acquiring Portuguese in a trilingual environment.* Clevedon, UK: Multilingual Matters.	**Cruz-Ferreira** described how her own children became fully competent in English, Swedish, and Portuguese. She demonstrated how the three siblings apportioned linguistic and cultural space between the three languages and analyzed the strategies that young children develop to guide their own acquisition processes. This book-length treatment of trilingual development was also among the first to emphasize children's agency in shaping multilingual FLP.	**A, C1, C3**
2006	King, K. A. & L. Fogle (2006). Bilingual parenting as good parenting: Parents' perspectives on family language policy for additive bilingualism. *International Journal of Bilingual Education and Bilingualism* 9.6, 695–712.	**King & Fogle**, building on De Houwer (1998), examined how parents explained and framed their family language policies. The authors conducted interviews with 24 families who were attempting to achieve additive Spanish–English bilingualism for their young children. Parental participants differed from those of previous studies, as their family language policy required them to use and teach a language that was not the primary language of the wider community nor, in many cases, the parents' first language. Findings revealed how parents make these decisions; how parents position themselves relative to 'expert' advice; and how these decisions are linked to their identities as 'good' parents. It emerged that parents primarily relied on their own personal experiences with language learning in making decisions for their children.	**B**

YEAR	REFERENCES	ANNOTATION	THEME
2006	Takeuchi, M. (2006). *Raising children bilingually through the 'one parent-one language' approach: A case study of Japanese mothers in the Australian context*. Bern: Peter Lang.	**Takeuchi** investigated the effectiveness of the OPOL approach for older children (aged 5–8) within Japanese-speaking families residing in Australia. This book reported on an interview study of 25 Japanese mothers married to non-Japanese Australian men and four case studies of Japanese mothers and their children. Takeuchi found that the quality of input from the Japanese-speaking parent and an elaborative style that encouraged the child to participate in conversation was key to bilingual development. Firmly establishing the minority language as the language of communication prior to the child's entry to school also positively affected minority language maintenance.	**C1**
2007	De Houwer, A. (2007). Parental language input patterns and children's bilingual use. *Applied Psycholinguistics* 27, 411–424.	**De Houwer** addressed the question of why some children exposed to two languages from early on fail to speak those two languages, thus extending past survey work which had focused only on parent language choice (LYON 1996). The author collected questionnaire data from 1,899 families in which at least one of the parents spoke a language other than the majority language. Questionnaires asked about the home language use in the case of families consisting of at least one parent and one child between the ages of 6–10. De Houwer found that all children spoke the majority language, but that minority language use was not universal. Differences in parental language input patterns at home correlated with differences in child minority language use. Home input patterns in which both parents used the minority language and in which at most one parent spoke the majority language had a high chance of success. This research provides the most convincing evidence to date that the OPOL approach provides neither necessary nor sufficient input conditions for balanced bilingual development.	**C1**

YEAR	REFERENCES	ANNOTATION	THEME
2007	Lanza, E. & B. E. Svendsen (2007). Tell me who your friends are and I might be able to tell you what language(s) you speak. Social network analysis, multilingualism, and identity. *International Journal of Bilingualism* 11, 275–300.	**Lanza & Svendsen** examined social networks, language choice patterns, and language socialization among multilingual 48 Filipinos in Oslo, Norway. They focused on 48 participants with children under 18 with an eye towards understanding patterns of language maintenance. Extending and critiquing social network analysis (e.g. WEI 1994), they argued that this approach is a viable predictive tool for assessing language choice and maintenance in migrant communities, but should be supplemented with interpretive, constructivist approaches that can account for issues of identity and ideology.	**B, C2, C3**
2008	Canagarajah, A. S. (2008). Language shift and the family: Questions from the Sri Lankan Tamil diaspora. *Journal of Sociolinguistics* 12.2, 143–176.	**Canagarajah** collected interview data from Sri Lankan Tamil communities in the US, UK, and Canada to document how families account for the rapid loss of Tamil in the diaspora. Findings demonstrated how families' Tamil language maintenance goals were undermined by favorable attitudes towards English; the need to make up for past deprivations because of caste, religious, and gender inequality; the pressure to join the social mainstream; and the need to resolve intergenerational tensions. Canagarajah's research underlined the importance of situating the family decisions in macro-social institutions, power, and history.	**B**
2008	Fogle, L. W. (2008). Home–school connections for international adoptees: Repetition in parent–child interaction. In J. Philp, R. Oliver & A. Mackey (eds.), *Second language acquisition and the younger learner: Child's play?* Amsterdam: John Benjamins, 279–301.	Using a language socialization framework, **Fogle** compared parents' interactional styles in two international adoptive families. In both families English was the primary medium of communication. The children (aged 4–10) had arrived within one year of the study and were all native Russian speakers. Fogle found that a facilitative style that included scaffolding and elicitations led to the production of more elaborated speech from the English language-learning children. She connected these findings to academic outcomes and literacy gains for the children.	**C1, C3**

2008	Hua, Z. (2008). Duelling languages, duelling values: Codeswitching in bilingual intergenerational conflict talk in diasporic families. *Journal of Pragmatics* 40, 1799–1816.	**Hua** investigated the relationship between social interaction and socio-cultural values, focusing on the strategic use of code-switching within intergenerational talk. Samples of conflict talk from a corpus of 100+ hours of audio-recorded family conversations between parents and children within Chinese diasporic families in the UK were collected. Hua analyzed how conflicts in values and identities are negotiated, mediated, and managed in bilingual interaction. Contrary to the stereotype of the obedient Chinese child, children challenged their parents' positions. Hua showed how multilingual language use contributes to the emergence of new interpersonal relationships and social values.	**C2, C3**
2008	King, K. A. & A. Logan-Terry (2008). Additive bilingualism through family language policy: Ideologies, strategies and interactional outcomes. *Calidoscópio* 6.1, 5–19.	**King & Logan-Terry** attempted to extend LANZA'S (1997/2004) work to a new context, by studying middle-class families in which native English-speaking mothers used their second language, Spanish, to communicate with their children. Mothers and paid Spanish-speaking Latina caretakers (nannies) were both found to stick to their stated language policies and use mainly Spanish in interaction with children. The nannies, however, tended to take on a more pedagogical role through correcting children's utterances, whereas mothers used more expansion strategies in an effort to validate children's contributions to the conversation.	**C3**
2008	McCarty, T. L., M. E. Romero-Little & O. Zepeda (2008). Indigenous language policies in social practice: The case of Navajo. In K. A. King, N. Schilling-Estes, L. Fogle, J. Lou & B. Soukup (eds.), *Sustaining linguistic diversity: Endangered and minority languages and language varieties*. Washington, DC: Georgetown University Press, 159–172.	**McCarty, Romero-Little & Zepeda** analyzed ethnographic interviews with Navajo community members to understand how tacit and official language policies play out in everyday social practice. The authors documented how contradictory language ideologies that simultaneously valorized and stigmatized Navajo and its speakers influenced the language choice of Navajo youth. This study describes the decreasing use of Navajo by younger generations, connected to feelings of shame when speaking the language and stigmatization. However, the authors also found that youth potentially possessed greater Navajo proficiency than they demonstrated or than adults credited.	**B, C2**

YEAR	REFERENCES	ANNOTATION	THEME
2008	Schwartz, M. (2008). Exploring the relationship between family language policy and heritage language knowledge among second generation Russian–Jewish immigrants in Israel. *Journal of Multilingual & Multicultural Development* 29.5, 400–418.	**Schwartz** surveyed Russian–Hebrew speaking school-aged children (mean age 7;2) and parents in Israel about their home language use and connected these data to scores on tests of vocabulary knowledge. Children's vocabulary knowledge in the L1 Russian was tied to literacy in the heritage language. Children's language ideologies, not parents, seemed key in maintaining Russian (as in TUOMINEN 1999). Schwartz found that parents do not transmit their language ideologies, but rather that external support, such as through heritage language schooling, is key.	**C1**
2009	Bernier-Grand, C. T. (2009). My journey with language and literacy: Raising a bilingual child. *California School Library Association (CSLA) Journal* 33.1, 12–13.	**Bernier-Grand**, a children's author and Latino mother in the US, described how she was advised by many professionals to stop speaking Spanish to her son, and to use English only instead. Although not a research article (cf. KOURITZIN 2000), this piece informed understanding of the pressures faced by minority language parents, and represents one of the few parental accounts of subtractive bilingualism written from a minority perspective.	**A, B, C1**
2009	Curdt-Christiansen, X. L. (2009). Invisible and visible language planning: Ideological factors in the family language policy of Chinese immigrant families in Quebec. *Language Policy* 8.4, 351–375.	**Curdt-Christiansen**'s ethnographic study examined how family language policies are planned and developed in ten Chinese immigrant families in Quebec, Canada. Children in these families were developing language and literacy skills in Chinese, English, and French. Curdt-Christiansen focused on how multilingualism was perceived and valued, and how these three languages were linked to particular linguistic markets. Findings suggested that family language policies were strongly influenced by socio-political and economic factors (see CANAGARAJAH 2008), including parents' educational background, immigration experiences and their cultural disposition: in this case, Confucianism.	**B**

YEAR	REFERENCES	ANNOTATION	THEME
2010	Gafaranga, J. (2010). Medium request: Talking language shift into being. *Language in Society* 39.02, 241–270.	**Gafaranga** studied the micro-interactional processes of language shift in Rwandan Kinyarwanda–French bilingual families in Belgium. Extending LANZA (1997/2004), Gafaranga showed how language shift was 'talked into being' in family interactions through a specific practice, i.e. the medium request, which was used in family interaction, primarily by children, to shift the language of interaction to French. The study also found that when parents resisted children's medium requests by not switching to French, a parallel conversation in the two languages ensued. Children were thus allowed to use their preferred medium.	**C3**
2010	Macleroy Obied, V. (2010). Can one-parent families or divorced families produce two-language children? An investigation into how Portuguese-English bilingual children acquire biliteracy within diverse family structures. *Pedagogy, Culture & Society* 18.2, 227–243.	**Macleroy Obied**'s ethnographic study of three single-parent or divorced families with bilingual children challenged the commonly held notion that, in order to become bilingual and biliterate, children must live in the same household with two parents who use different languages. The study focused on the development of biliteracy practices and how purposeful, meaningful literacy activities can be promoted by single or nonresidential parents.	**C1**
2010	Quiroz, B., C. Snow & J. Zhao (2010). Vocabulary skills of Spanish–English bilinguals: Impact of mother–child language interactions and home language and literacy support. *International Journal of Bilingualism* 14.4, 379–399.	**Quiroz, Snow & Zhao** examined the relationship between home factors (e.g. literacy practices, home language use, immigration history) and the interactive language of 50 Latino mother–child dyads. Low-income, Spanish–English bilingual children (aged 4–5) and their mothers were interviewed, tested, and recorded while engaging in a shared picture-book reading activity. Data suggests that children from families that used more English had stronger English skills and weaker Spanish vocabulary outcomes (and vice versa). Findings also indicated that two factors significantly predicted children's vocabulary in both Spanish and English: reported (non-parental) exposure to reading activities in English or Spanish and frequency of maternal questions during book-reading activity (labeling questions, in particular) (cf. DÖPKE 1992).	**C1**

YEAR	REFERENCES	ANNOTATION	THEME
2012	Fogle, L. (2012). *Second language socialization and learner agency: Talk in three adoptive families*. Clevedon, UK: Multilingual Matters.	In a collective case study, **Fogle** examined the second-language socialization processes in three adoptive families (five parents and ten adoptees, ages 4–17), and analyzed how language ideologies, discourse practices, and family identities are negotiated and constructed in everyday activities. The data illustrated how language socialization processes are collaborative and co-constructed as children seek out opportunities for language learning and form self and family identities. The children's strategies, in turn, had lasting effects on their parents' own language ideologies and practices.	**B, C2, C3**
2012	Kirsch, C. (2012). Ideologies, struggles and contradictions: An account of mothers raising their children bilingually in Luxembourgish and English in Great Britain. *International Journal of Bilingual Education and Bilingualism* 15.1, 95—112.	**Kirsch** interviewed and observed seven middle-class, Luxembourgish mothers (residing in Great Britain with non-Luxembourgish husbands) who attempted to raise their children bilingually in Luxembourgish and English. The children's ages ranged from 20 months to 15 years. Kirsch found that the dominant language ideology in Luxembourg, the mothers' multilingual competence, and their experience of multilingualism influenced their language ideologies (CANAGARAJAH 2008). However, the mothers' use of both languages with their children, the use of English at home, and the children's lack of communicative needs in Luxembourgish were not conducive to active bilingualism.	**B, C1**
2012	Fogle, L. W. & K. A. King (in press). Child agency and language policy in transnational families. *Issues in Applied Linguistics*.	**Fogle & King** examined data from three studies of transnational families (Russian/English-speaking international adoptive families and Spanish–English bilingual homes) and documented how child agency and language use patterns influenced parental language behaviors and shaped family language policy. The focus of analysis was on four aspects of child–parent discourse: (a) children's metalinguistic comments, (b) children's use of resistance strategies, (c) parental responses to children's growing linguistic competence, and (d) enactments of family-external ideologies of race and language.	**C1, C2, C3**
