Lesson 14

***Teacher Page* A**

Overview

Students continue to model fractions with chips. They determine possible fractions that can be shown with different sets of chips.

Materials

- Chips for students
- Student Pages A, B

Teaching Actions

1. Put this chart on the board and ask children to tell you what fractions can be shown with each unit and why.

Unit in chips	Fractions you can show
6 chips	Sixths, halves, thirds; not fourths
8 chips	
12 chips	
15 chips	
20 chips	

2. Ask students to name fractions that cannot be shown with the above sets.

Comments

Teaching Actions

3. Present these problems to students. Students model with chips. You draw pictures of models as students verbally describe their models to you.

1) Show 1/4 with chips.
   Use 8 chips as a unit.

2) Show 1/4 with chips.
   Use a unit other than 8 chips.

3) Show 1/6 with chips in 2 different ways. Use 6 chips and 12 chips as your units.

4) Show 3/5 with chips in two different ways. Use any two units.

4. Assign Student Pages A, B to reinforce chip model for fractions.

Comments

1. To encourage communication, have students write out steps showing a fraction with chips.

Name: _____

Lesson 14

***Student Page* A**

1. Show each of these fractions with chips in two ways. You decide on the unit. Draw pictures of your models.

	Model 1	**Model 2**
$\frac{2}{3}$		
$\frac{1}{5}$		
$\frac{2}{9}$		
$\frac{3}{6}$		
$\frac{4}{5}$		
$\frac{1}{2}$		

Name: _____

Lesson 14

***Student Page* B**

Draw pictures to model each story.

2. 2/3 of Mr. Vega's math class are girls. There are 21 students in the class.

3. You can buy a box of 16 gum drops for 35 cents. If you share the box with three others, what fraction will each receive? How many gum drops will each receive?

4. William and his friend shared a small pizza evenly. How much did each eat?

5. Jessica and Jennifer shared their bag of M&M's with LeAnna. If each got a fair share, how much of the bag did Jessica and Jennifer get **together**?
