Record the answer to each question on a separate sheet of paper.

A

At Ralph's fruit stand 3 apples cost 90 cents. You want to buy 7 apples. How much will they cost?

1. What are the two possible rates for this problem?

2. Show each rate as a unit rate

3. What does each unit rate tell you?

4. Which unit rate will help you solve this problem?

5. If it costs 30 cents to buy 1 apple, how much* will 2 apples cost? 4 apples? Complete this table.

Apples	Cost
1	30
2	
3	
4	
5	

6. What number pattern do you see?

7. Since you know the unit price, write a number sentence for the cost of 7 apples. The cost of any number of apples.

B

At a bank in England, Ms. Vega wanted to exchange 20 U.S. dollars for British pounds. The exchange rate was 3 U.S. dollars for 2 British pounds. How many pounds did Ms. Vega receive?

1. What,are the two possible rates for this problem?

2. Show each rate as a unit rate.

3. What does each unit rate tell you?

4. Which unit rate will help you solve this problem?

5. How many British pounds can be exchanged for 1 U.S. dollar? For 2 U.S. dollars? For 3 U.S. dollars? Complete this table:

Dollars	Pounds
1	
2	
3	
4	
5	

6. What number pattern do you see?

7. Since you know the unit rate, write a number sentence for the number of pounds you can exchange for 20 U.S. dollars. The number of pounds for any number of U.S. dollars.
