# C-BAS-R

Computer Based Assessment System for Reading

University of Minnesota
Driven to Discover℠

CEHD | College of Education + Human Development

## What is C-BAS-R?

The **Computer Based Assessment System for Reading ("C"-BAS-R)** Project is in its 7th year of funding from the US Department of Education. The project is designed to establish an adaptive computer based reading assessment that **dynamically individualizes the test** to optimize reliability and validity for any student in the K to 5th grade range.

"C"-BAS-Math coming in 2012-13

Principal Investigator:
Theodore J. Christ, PhD

## Why use C-BAS-Reading?

- Quality measures
  - Contemporary technology and psychometric theory is used to individualize highly efficient assessments to identify students at risk for low achievement and low annual yearly progress (AYP)
  - Each assessment is individualized for the student
  - Assesses **BROAD READING** across five domains: **concepts of print, phonological skills, phonics and decoding, vocabulary, *and* comprehension**
  - High criterion validity with other measures including CBM-R, Gates MacGinitie and Measures of Academic Progress (MAP)

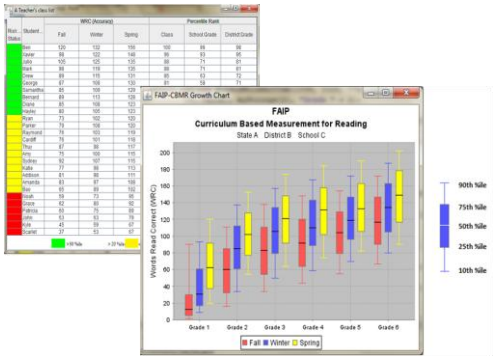

- Highly Efficient & Easy to Use
  - Computer administered & scored in **10 to 15 min**
  - Delivered through an online browser
  - Easy to read reports are automatically generated

- Improve student achievement
  - Use of C-BAS-R to identify students who are at risk and need additional supports as part of **Response to Intervention (RTI)**
  - Screen, benchmark & monitor **3 to 4 times a year**

- Help with interpretation
  - Easy-to-read manuals and training materials will be available to aid teacher and school implementation of screening, benchmarking and monitoring

## Current development:

In 2010-11, we are finalizing materials for public use and dissemination. We are inviting a small number of districts and schools to participate in a scaled use of C-BAS-R in **2011-12** at **Minimal or No Cost.** Those sites will become our partners. Large scale adoption and use is scheduled for **2012-13**.

Use with FAIP-R **Curriculum-Based Measurement System** - contact Dr. Christ for information
