Community Based Participatory Research

- Community-Based Participatory Research (CBPR):
  - Collaborative approach to research
  - Equitably involves community members organizational representatives and researchers in all aspects of the research project
  - Benefits participants through direct intervention or using the results to inform action for change (Israel, Schulz, Parker, & Becker, 1998)
- Sharing results with community is an ethical responsibility and key principle of CBPR but happens irregularly in practice (Chen, Diaz, Lucas, & Rosenthal 2010).
- If results sharing happens, not treated as integral part of the research process or evaluated.

Padres Informados/ Jóvenes Preparados

Community Based Participatory Randomized Controlled Trial aimed at preventing tobacco and other substance use in Latino youth (ages 10-14) by strengthening family skills and promoting positive youth development.

Padres Project

- 3 University of Minnesota Departments
- 7 Community Based Latino Family-Serving Organizations
- Curriculum developed with Latino parents and youth
- 5 year grant, entering fifth year

Objectives

- Understand how to share Community-Based Participatory Research results with community members based on existing literature.
- Create results-sharing plan for the *Padres Informados/ Jóvenes Preparados* project.
- Add evaluation component to results-sharing process that can inform future efforts.

Methods

- Literature review:
  - Dissemination in CBPR
  - Evaluation of dissemination/ knowledge utilization
- One-on-one semi-structured interviews:
  - Collaborated to create questions based on literature review (Community Alliance for Research and Engagement, 2009)
  - Identified point people at each community organization to interview
  - Used interviews to identify key priorities and resources
- Meetings and discussion with *Padres* core team.

Preliminary Results

- Interviewed seven community partners from four organizations.
- General themes emerged:
  - Community enthusiasm for results-sharing process
  - Necessity of meeting audience where they are, making messaging accessible to audience
- Interviews being used to create an in-depth results-sharing plan including:
  - Goal for particular activity
  - Target audience
  - Media for presentation of results (ex. video, results-sharing parties, region-specific news outlets, site-specific social media)
  - Execution details (ex. contacts for reaching specific audiences at each site, locations for events, language for each results-sharing activity)

TRIO Ronald E. McNair Post-Baccalaureate Achievement Program

Padres Informados, Jóvenes Preparados

University of Minnesota

Model for Evaluation of Results-Sharing Plan

Inputs	Community partners, community networks, findings, budget
Activities	Outlined in results-sharing plan Ex.- video, results-sharing parties, media coverage
Outputs	Who did we reach with our results sharing efforts? How did we reach them? Was the plan carried out?
Outcomes	Closure, satisfaction of participants, satisfaction of community partners, validation that this curriculum makes change, usable tools and information
Impact	Greater community trust and appreciation of research process to encourage further collaboration, model for results-sharing process in future studies

Adapted from W.K. Kellogg Foundation, 2004.

Implications

- This results-sharing model will benefit the current program and community by:
  - Identifying and sharing useful information for organizations, participants, and communities
  - Increasing community awareness of program
  - Encouraging future community-academic partnerships through increased trust and inclusion
- This plan and process should serve as a model for future community-based studies, contributing to an often-neglected area of the field.
